

Charles Field

Student at New Jersey Institute of Technology

Jackson, NJ 08527 | 732-575-6253

LinkedIn: <https://www.linkedin.com/in/charles-field-574108205>

PROFESSIONAL SUMMARY

Information Technology student with 2+ years hands-on experience deploying production software systems and cloud infrastructure in client-facing environments. Specialized in forward-deployed engineering with proven expertise translating complex technical requirements into scalable solutions through direct stakeholder collaboration. Proficient in containerized application deployment, cloud platform architecture (AWS), and CI/CD automation. Track record implementing data pipelines, API integrations, and enterprise-grade security protocols across diverse technical stacks. Available for extensive travel supporting customer deployments and on-site technical implementations.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, TypeScript, Java, SQL

Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda), Docker containerization, Infrastructure automation, RESTful API architecture

Data & ML Engineering: PostgreSQL, MySQL, data pipeline development, ETL workflows, model deployment frameworks

DevOps & Deployment: Automated deployment pipelines, container orchestration fundamentals, configuration management, version control (Git)

Domain Expertise: Client-site technical implementations, production system integration, enterprise security protocols, cross-functional solution architecture

PROFESSIONAL EXPERIENCE

AI Trainer / Forward Deployed Technical Specialist | Handshake | Remote

December 2024 – Present

- Deploy and validate 150+ AI model implementations across production environments, collaborating directly with enterprise clients to translate business requirements into deployed technical solutions with 30% accuracy improvement
- Engineer containerized deployment workflows and automated validation pipelines reducing implementation cycles from 4 weeks to 3 weeks through infrastructure optimization and systematic testing protocols
- Architect data integration frameworks connecting client systems to ML inference engines, implementing secure API endpoints and monitoring dashboards for real-time performance tracking
- Drive technical discovery sessions with stakeholders to document infrastructure requirements, security constraints, and compliance specifications informing deployment architecture decisions
- Build deployment documentation and runbooks enabling cross-functional teams to replicate solutions across 15+ client environments with consistent performance benchmarks

TECHNICAL PROJECTS

Production E-Commerce Platform | Django, React, PostgreSQL, AWS, Docker

2024

- Architected and deployed full-stack cloud application serving 200+ active users on AWS infrastructure, implementing automated deployment pipeline from development through production release
- Optimized PostgreSQL database queries and REST API endpoints reducing average response times by 40% and supporting 1,000+ daily transactions through indexed data structures and caching strategies
- Integrated third-party payment processing APIs (Stripe) with PCI-compliant security protocols, implementing encrypted data flows and audit logging meeting enterprise security standards
- Configured AWS cloud infrastructure including EC2 compute instances, S3 object storage, and RDS managed databases using infrastructure automation scripts for reproducible deployments

Campus Technology Implementation Specialist | NJIT Student Services

September 2023 – May 2024

- Executed on-site system deployments and technical troubleshooting for 500+ end users achieving 95% first-contact resolution through systematic diagnostic frameworks and solution implementation
- Collaborated with IT operations teams to design integration solutions connecting legacy campus systems with cloud platforms, resolving network connectivity and authentication compatibility issues
- Delivered hands-on technical training for 50+ users on enterprise tools and cloud-based collaboration platforms, creating documentation translating complex technical concepts into actionable workflows

EDUCATION

Bachelor of Science in Information Technology | New Jersey Institute of Technology

Expected May 2027

Relevant Coursework: Cloud Infrastructure Architecture, Network Security, Database Systems, Systems Integration, DevOps Engineering

Associate's Degree in Computer Science | Ocean County College

January 2023
